

# Advanced Permissioning

SOLUTIONS

# Advanced Permissioning

Gives everyone within an organization the right level of access, visibility, and control.

## Tiered

From attendants to regional managers to executives, operators can ensure that all team members have the correct read/write permissions

## Configurable

Access is configurable on a location level and user level

## Granular

Configuration applies to rate management, blackouts, reporting, inventory changes, and more

# Ocra Transforms Permissioning

## Without Ocra

Inconsistent demand channels, so the same employee could have different levels of control in two different platforms

Too much, too little, or irrelevant data and info being served up to users

Permissioning not configurable on a per-user or per-location level

Impossible to set rate management and inventory management by user

Permissioning applies across all demand channels and is set and enforced through Ocra

Executives, attendants, and everyone in between has the control they need to view, set, or change rates, blackouts, inventory, etc. down to the Location level

Only the most relevant info and data is displayed to each user – no clutter!

# Ready to learn more?

Give all users the right amount of access and visibility with the most granular permissioning in the industry today.

The screenshot displays the Odra web application's 'Users' management page. On the left is a navigation sidebar with icons and labels for 'Locations', 'Universal Inventory', 'Rate Management', 'Blackouts', 'Reporting', 'Users' (highlighted), 'Organizations', 'Taxes and Fees', and 'Products'. The main content area is titled 'Users' and includes a '+ Add User' button. Below the title are two tabs: 'Live' (active) and 'Onboarded'. A filter section shows 'Organization' set to 'Odra', 'Username/Email' as an empty search box, and 'Role' as a dropdown menu. The user list contains two entries: 'avarieanderson' (ID 22454) and 'chrisevertson' (ID 11634). Each entry shows the user's name, organization, email address (with a link), and role (Super Admin), along with a 'Manage' button. The page footer shows '159' items.
